EDUCATION:

California State University, Los Angeles

May 2025

Bachelor of Science, Computer Science, Summa Cum Laude

EXPERIENCE:

Software Engineer Intern | Leidos

Feb. 2025 - July 2025

AWS, Python, Javascript, Llama 3 LLM, RESTful API, MySQL

Los Angeles, CA

- Engineered a serverless ETL pipeline using AWS S3, Glue, and Athena to ingest and transform datasets into queryable formats; built fact and dimension tables to support efficient analytics and reporting.
- Enhanced resume screening platform by building API endpoints integrated with AWS Bedrock's LLaMA 3 to generate and store text embeddings in a vector database to automate skill extraction and reduce manual filtering.
- Collaborated in an Agile Scrum environment with daily standups, sprint planning and peer code reviews to ensure robust, maintainable code.

Software Engineer Intern | We2Link

Aug. 2024 - Apr. 2025

HTML, CSS, JavaScript, React.js, Firebase

Los Angeles, CA

- Developed a full-stack application with React.js and Firebase to enhance memory management for users with cognitive impairments by helping them efficiently organize memories, passwords, contacts, and daily tasks.
- Engineered a detect-duplicate-contacts and merge feature by representing contacts as graph nodes, connecting them via shared contact details, and performing DFS to identify clusters of duplicates, enabling users to selectively merge and retain relevant contacts.

Technology Analyst Intern | Accenture

June 2024 - Aug. 2024

HTML, CSS, PostgreSQL, JavaScript, React.js, Powerpoint

Los Angeles, CA

- Revamped the front end of a client's billing platform by migrating to React.js, resulting in a more maintainable, modular, and performant codebase, which significantly enhanced the experience for their 3.7 million customers.
- Contributed to frontend development while acting as a technical liaison, delivering project updates to clients and creating presentations that clarified engineering concepts.

Software Engineer Intern | Partillion BioScience

Feb. 2024 - May 2024

Python, Tk-Inter, OpenCV (Computer Vision), ImageJ

Pasadena, CA

- Spearheaded development of the particle analysis program for nano-vial particle detection and analysis by utilizing Python and OpenCV to improve particle detection which increased the success rate of quality control by 27.4%.
- Automated merging of hundreds of composite color channels for nano-vial images using Python, enhancing the images used in cancer studies and drastically minimizing the manual work needed to create composite images.

Software Engineer Intern | Northrop Grumman

June 2023 - Aug. 2023

Git, JIRA API, Python, Pandas, Matplotlib, NumPy, TkInter

Baltimore, MD

PROJECTS:

Machine Learning: Human Emotion Detector

Python, Jupyter Notebook, Pandas, Keras, Tensorflow, Scikit-Learn

- Trained various machine learning and deep learning models, including SVM, ANN, and CNN, to predict human emotions from grayscale images, achieving accurate emotion classification through image analysis.
- Preprocessed a dataset of 37,000+ human emotion images taken from Kaggle, utilized Pandas, Keras, and NumPy to optimize them as training data for machine learning models, achieving an average prediction accuracy of 60%.

Spotify Wrapped

Python, Flask, HTML, JavaScript, React.js, Tailwind CSS

- Created an application using Flask, and React.js that emulated Spotify's 'Spotify Wrapped' feature, which provided users with personalized Spotify metrics and allowed users to access their data based on their music preferences.

TECHNICAL SKILLS:

Languages: *Java, Python, SQL, HTML, CSS, JavaScript*

Tools: *AWS, Agile, JIRA, Confluence, BitBucket, Github, Linux/Unix, Firebase*

Libraries/Frameworks: *Flask, Bootstrap, React.js, Node.js, NumPy, Pandas, Matplotlib, PyTorch, TensorFlow, Scikit-Learn, Keras, OpenCV, Tk-Inter, Spring Boot, Tailwind*
