EDUCATION

California State University, Los Angeles

Bachelor of Science in Computer Science, GPA: 3.9

Los Angeles, CA

May 2025

EXPERIENCE

Technology Analyst

Sep. 2025 – Present

Accenture

Los Angeles, CA

- Engineered backend automation workflows supporting 50+ internal users, automating high-volume enterprise transaction processing and reducing manual operational effort.
- Implemented data validation and integrity checks using Open SQL on large enterprise datasets to prevent failed transactions and improve system reliability, increasing transaction success rates to 99%+.
- Developed reporting and data processing systems to extract, transform, and aggregate large-scale transactional data using optimized ABAP internal table operations.

Software Engineer Intern

Feb. 2025 – Jul. 2025

Leidos

Los Angeles, CA

- Designed and built a serverless ETL pipeline for 40+ datasets using AWS S3, Glue, and Athena to transform and structure large-scale datasets into analytics-ready fact and dimension tables, supporting a team of 6 data analysts.
- Created an AI-powered candidate matching platform using AWS Bedrock (Llama 3), vector embeddings, and semantic search to automate 300+ candidate-job matching and reduce manual resume screening.

Software Engineer Intern

Aug. 2024 – Apr. 2025

We2Link

Los Angeles, CA

- Engineered a full-stack application with React.js and Firebase to improve memory management for users with cognitive impairments by organizing memories, passwords, contacts, and daily tasks.
- Spearheaded a graph-based duplicate-contact detection system using DFS and connected component analysis to automatically identify and merge related user for more than 50 active users.

Technology Analyst Intern

Jun. 2024 – Aug. 2024

Accenture

Los Angeles, CA

- Migrated a large-scale billing platform frontend to React, improving maintainability, modularity, and performance for a system serving 3.7M+ users.
- Collaborated with stakeholders to deliver technical updates and translate engineering concepts into clear presentations for client-facing communication.

Software Engineer Intern

Feb. 2024 – May 2024

Partillion Bioscience

Pasadena, CA

- Developed a computer vision pipeline using Python and OpenCV for nano-vial particle detection, improving quality control success rates by 30%.

Software Engineer Intern

Jun. 2023 – Aug. 2023

Northrop Grumman

Baltimore, MD

- Automated metric generation in Python and designed and tested a backend data pipeline, reducing manual metrics collection effort by 90% across projects while powering 50% of the automation platform's reporting metrics.

PROJECTS

Spotify Wrapped Clone | *React.js, Python, FastAPI, JavaScript*

June 2024 – Dec. 2024

- Built a full-stack web application integrating the Spotify Web API with OAuth authentication to securely access user listening history and preferences.
- Designed and implemented backend services using FastAPI to aggregate and process user listening data into personalized music insights and summaries.
- Produced a React-based frontend dashboard to visualize user-specific Spotify metrics and listening patterns in an interactive interface.

TECHNICAL SKILLS

Languages: Java, Python, SQL, HTML, CSS, JavaScript, Kotlin, ABAP

Cloud/Databases: AWS (S3, Glue, Athena, Lambda, EC2), MySQL, PostgreSQL, Firebase Firestore

Developer Tools: Git, VS Code, PyCharm, IntelliJ, Eclipse

Libraries/Frameworks: React, Node.js, Flask, FastAPI, pandas, NumPy, Matplotlib, Scikit-Learn, Bootstrap
